

Tallapoosa River Access

Horseshoe Bend has 3.5 miles of the Tallapoosa River running through the heart of the park. The water can be shallow in places along the river and near the boat ramp depending on the flow rate from Harris Dam located above the park. The river is suited to flat bottom boats, canoes, rafts, etc. The water is not deep enough for larger boats or for wave runners.

Access to the river through the park maintained boat ramp is located off Alabama Highway 49 at the bridge.

Caution should be used when putting boats into the river and taking them out.

All rules and regulations for operating boats in the state of Alabama apply within the park.
